Research interests: 1, #Multi-modal LLMs 2, #AI4S 3, #Efficient Deep Learning 4, #Evaluation of Generative Models 5, #Dataset Distillation

PROFILE

My research focuses on combining large language models (LLMs) with domain foundation models (FMs) — making the integration both efficient and effective — with growing emphasis on scientific domains such as small molecules and proteins. On the modeling side, I proposed a training-free framework that enables LLMs to reason over non-text modalities via in-context representation learning, with the molecular domain as the testbed (NeurIPS 2025, first author; Prof. Alvin Chan as corresponding author), and contributed to subsequent work on strategic multimodal representation alignment (AAAI 2026). On the evaluation side, I re-designed the human-evaluation protocol for text-to-video generation to improve reliability and reproducibility (NeurIPS 2024, first author), and contributed to ConvBench, a hierarchical multi-turn benchmark for large vision-language models (NeurIPS 2024 Spotlight). Earlier work on efficient learning includes expanding-window trajectory matching for lossless graph dataset condensation (ICML 2024, co-first author). Across 8 publications at top-tier ML venues (NeurIPS, ICML, AAAI) and IEEE conferences, I am first or co-first author on 5. I am supported by the NTU Research Scholarship, and serve as a reviewer for ICLR 2026, NeurIPS 2025/2026, and ICML 2025/2026. Further details on my [Google Scholar](#).

EDUCATION

Nanyang Technological University, College of Computing and Data Science, Singapore Jan. 2025 — Present
Ph.D. in Computer Science

Advisor: *Prof. Alvin Chan Guo Wei* (College of Computing and Data Science, NTU)

University of Electronic Science and Technology of China, Chengdu, China Sep. 2020 — Jun. 2024

B.Eng. in Computer Science and Technology (Joint Degree Program in Smart Finance & Blockchain Finance)

Selected coursework: Machine Learning (97), Data Structures & Algorithms (95), Smart Contract & DApps

Development (95), Mathematical Modeling (96), Data Mining & Big Data Analytics (92), Probability & Statistics (92),

Database Theory (91), Software Engineering (91), Computer Organization (90). GPA: 88.51 / 100

ACADEMIC EXPERIENCE

Nanyang Technological University, College of Computing and Data Science Singapore

Ph.D. Student. Advisor: Prof. Alvin Chan Guo Wei Jan. 2025 — Present

- Exploring new ways to combine large language models (LLMs) with domain foundation models (FMs), aiming for integrations that are both more efficient and more effective. Current focus is on scientific domains — small molecules and proteins — where structured FM representations can complement LLM reasoning.

Nanyang Technological University, College of Computing and Data Science Singapore

Research Assistant. Advisor: Prof. Alvin Chan Guo Wei Oct. 2024 — Jan. 2025

- Investigated whether large language models can reason over non-text modalities without additional training, by treating modality tokens as in-context representations rather than fine-tuning targets. The proposed In-Context Representation Learning (ICRL) framework, evaluated on the molecular domain, is to our knowledge the first training-free framework of its kind. Published at NeurIPS 2025 (first author).

Shanghai Artificial Intelligence Laboratory Shanghai, China

Trainee Researcher. Focus: evaluation of large generative models. Oct. 2023 — Oct. 2024

- Designed the T2VHE protocol, a standardized human-evaluation pipeline for text-to-video models with well-defined metrics, annotator training, and a dynamic evaluation module; reduces evaluation cost by ~50% while preserving annotation quality. Published at NeurIPS 2024 (first author).
- Co-built ConvBench, a hierarchical multi-turn benchmark for large vision-language models that disentangles perception, reasoning, and creation. Published at NeurIPS 2024 Spotlight (co-author).

NUS High Performance Computing for AI (HPC-AI) Lab

Singapore

Research Intern. Focus: graph dataset condensation.

Apr. 2023 — Oct. 2024

- Investigated lossless graph dataset condensation. Proposed expanding-window trajectory matching with a curriculum-based supervision design that substantially closes the gap to full-graph training on large-scale graphs. Published at ICML 2024 (co-first author).

AWARDS AND SCHOLARSHIPS

1. NTU Research Scholarship (R-RSS) <i>Graduate College, Nanyang Technological University</i>	Sep. 2024
2. Excellent First-class Scholarship <i>University of Electronic Science and Technology of China</i>	Oct. 2023
3. Xiaomi Scholarship <i>Xiaomi Foundation × UESTC</i>	Oct. 2023
4. Tencent First-class Scholarship <i>Tencent Foundation × UESTC</i>	Oct. 2022
5. NTU Project Scholarship <i>Nanyang Technological University (undergraduate research visit)</i>	Oct. 2022
6. Bronze Award, Chengdu 80 Fintech Product R&D Competition <i>Chengdu Fintech Industry Innovation Center</i>	Oct. 2021
7. Special Prize, 7th UESTC “Internet Plus” Innovation and Entrepreneurship Competition <i>University of Electronic Science and Technology of China</i>	Aug. 2021
8. Second Prize (Sichuan Province), 11th National College Students E-commerce Competition <i>National Ministry of Education</i>	Aug. 2021
9. Blockchain Financial Experiment Class Scholarship <i>University of Electronic Science and Technology of China</i>	Oct. 2020

ACADEMIC SERVICE

Reviewer Recognition

- **ICML 2026 Gold Reviewer** — awarded to top reviewers based on area-chair ratings of submitted reviews.

Conference Reviewer

- International Conference on Learning Representations (ICLR): 2026
- Conference on Neural Information Processing Systems (NeurIPS): 2025, 2026
- International Conference on Machine Learning (ICML): 2025, 2026
- ICLR 2025 Workshop on AI for Nucleic Acids (AI4NA)

Workshop Committee

- ECCV 2024 Workshop on Dataset Distillation Challenge — Committee Member

SKILLS AND LANGUAGES

Programming: Python (primary), Solidity, C; experienced with DApp / smart-contract development.

ML / DL: PyTorch, Hugging Face, scikit-learn; familiar with multi-modal LLMs, diffusion models, GNNs, and dataset distillation pipelines.

Tools: Git, Linux, CUDA, LaTeX, Weights & Biases.

Languages: Chinese (Native); English (Fluent).
